### CHAPTER 1

#### INTRODUCTION

In today's economy, computers are widespread. It always stands out as one of the most remarkable accomplishments of science. Due to their diverse capabilities, they are used for a wide range of jobs. It aids in resolving the issues that humans face on a regular basis. As a means of resolving specific problems in human civilization, the influence of computer technology has evolved. Computers have greatly enhanced and streamlined the majority of everyday tasks, offering a platform for global communication.

Among all the ways computers have changed our world, none is as important as how they affect jobs. Within the era of computers, finding a job has changed. Instead of using traditional methods, like going in person or walk-in, the job seekers now use websites and apps to apply jobs and talk to employers. This helps people find work quickly in a fast-changing world.

Furthermore, the researcher aims to create and develop a user-friendly platform for both users that involved in the making of the system. Online job application systems, which are driven by computers, have an important role in transforming the way in which individuals secure employment and the manner in which organizations attract skilled individuals. Through a comprehension of the complexities of these systems and the utilization of computer technology, we are able to enhance their efficiency and efficacy. This makes the job market fairer. Everyone gets a fair chance at finding a job, and both job seekers and employers can make smart choices based on skills and qualifications.

# University of Caloocan City – North Campus

Biglang Awa St. Grace Park East. Caloocan City

## Computer Studies Department

### 1.1 Background of the Study

In the continuous changing of today's hiring process, the traditional hiring methods face a lot of challenges in meeting the requirements of the today's digitalized society. The manual hiring process frequently experiences delays and hassles during the procedure that impede the efforts of both the job seekers and employers on finding the suitable jobs and qualified applicants for the job. The results will not be very pleasing for all the users that are involved, additionally the cost that is needed in traditional methods including printing of job vacancy every time that there's an open slot for a job and also managing a hard copy of the application materials, and that will further add more challenges to the organizations or company for finding a qualified candidate.

The researcher recognizes these problems, and the need for new solutions to make the job application process easier and faster become more evident. Thus, the "Online Job Application System" is a big step for solving these problems. It's a website that was designed to change how people find the jobs they prefer and how the companies hire an applicant. This project wants to fill the gap by creating this digital platform. It will make applying a lot easier, help people talk to employers easily, and also give employers quick information they need. Through the shift from paper-based methods to using a computer, the system aims to make things a lot better, easier and available for everyone. By using the power of technology around us and innovation, the project aims to do more than the expectations of the clients.

## **1.2 Statement Objective**

### **1.2.1 General Objectives**

The JobSync: Online Job Application System primary objective is to offer an easy-to-use platform for applicants on finding jobs. To streamline the hiring process by allowing applicants to submit their job applications, and also to make it easy for the employers to manage and review the applications effectively. The features of the system include the job postings, application submission, resume storage, and tools for employers to review and select candidates.

### **1.2.2 Specific Objectives**

The specific objectives of the study are the following:

- To ensure that users can navigate the web without difficulty and that the web's UI will be pleasing to the eyes.
- To ensure legitimacy and security of the user's sensitive information, the system will utilize OTP authentication.
- To provide tools for employers to schedule interviews efficiently, reducing delays in the hiring timeline.

# University of Caloocan City – North Campus

## Biglang Awa St. Grace Park East. Caloocan City

### Computer Studies Department

### 1.3 Significance of the Study

The JobSync: Online Job Application System will be beneficial to the following:

#### To the Organization:

This study will benefit the organization in a way that the method currently used will be more effectively monitored and controlled, overseen, and managed by giving them a new sophisticated system.

#### To the Guest User:

This study will give benefits to the guest user to freely explore the platform's features and browse job listing.

#### To the Applicants:

It will help the applicants to use a user-friendly platform for job search, application, can effortlessly manage profiles, upload materials, track application status, and receive job alerts.

#### The Employer:

It will help the employers to post job vacancies, to schedule the interviews and to notify the applicants about training or seminars and streamline hiring easily.

#### To the Researchers:

This study will be remarkable learning and additional knowledge on how to manage a job application process while discovering new ideas to the process of developing this study.

#### To the Future Researcher:

This study will serve as their reference for their research activities and will help them to gain knowledge to express their ideas in their chosen study.

## University of Caloocan City – North Campus

Biglang Awa St. Grace Park East. Caloocan City

### Computer Studies Department

#### 1.4 Scope and Limitation of the Study

This study is focused on designing and implementing a system that will innovate the job application process, providing job applicants with a seamless and user-friendly experience while streamlining hiring procedures for employers.

- **Authentication & Registration Module:** The system will have OTP authentication through email, integrating a user registration process and allowing users to create an account.
- **Employer Control Panel:** The system will provide a user interface for the employer to easily control the schedules of interviews and posting job vacancies.
- **Job Listings & Company Profiles:** The system will have a section that displays jobs, job descriptions and the company profile.
- **Application Status Notifications:** The applicant will be notified about the status of the job application through email.
- **System Analytics Dashboard:** The system has a dashboard that displays the total count of users, jobs, company, applicant and all the total data inside the system.
- **Job Search & Filtering:** The applicant can search for a job, keyword and company in the system.
- **Training & Seminar Offers:** The system will offer training or seminar offers for the applicants.
- **Admin Job Management:** The admin can delete job vacancies on the system.
- **Interview Scheduling:** The system has interview scheduling features for employer and job applicant.
- **Certification Generation & Distribution:** The system will generate a certificate for job

# University of Caloocan City – North Campus

## Biglang Awa St. Grace Park East. Caloocan City

### Computer Studies Department

applicants that attend seminars and training offers.

These are the delimitations of the study:

- If the user is not registered, no possible job application process can be done other than viewing the whole website.
- The user/applicant can only find and apply for a job on the system.
- The employer cannot select an applicant for the job unless they have applied through their JOB ADS.
- The Applicants can only search and apply for IT industry jobs; other industries are not accessible for job search.
- The Employers can only choose applicants who have applied through their posted job ads; direct selection of applicants outside the system is not permitted.
- The system will only accept phone numbers with the country code +63, ensuring that they are exclusively from the Philippines.

## CHAPTER 2

### METHODOLOGY OF THE STUDY

#### Agile SDLC

In this study, the developers employed the Agile System Development Life Cycle (SDLC), a structured approach used in the development, creation, and maintenance of information systems. The Agile SDLC encompasses six discrete stages: planning, analysis, design, implementation, testing and integration and maintenance.

During the planning phase of Agile SDLC, the project team, led by the researcher, gathers all the important details needed for the project. The researcher first identifies the "what" and "how" questions, the team work together to identify what are the requirements needed of the users of the possible users of the system. With the clear understanding of the requirements such as the registrations process, information needed for a job vacancy that will be posted on the system and

## University of Caloocan City – North Campus

Biglang Awa St. Grace Park East. Caloocan City

### Computer Studies Department

for the other needs of users. The researcher also makes plans for what part each member will be responsible, the two members are responsible for developing the system while the last one remaining member will be responsible for making the documents, such as revising the proposals, making the research paper and jot down all comments or suggestions of the panelist and mentors. The researcher will also think of how much money will it cost for the revisions needed, and plan for when the things needed to be done by. Lastly, the researcher collaborates to determine the possible problems that might come up and how to deal with those and what are the possible solutions for it.

Transitioning to the analysis phase will be conducted once the team has all agreed to move forward with their proposed system. This critical phase needs a thorough evaluation of all resources available, including the technology required. It will also cover the careful considerations of budgeting of the system. Furthermore, this phase will delve into the overall flow of the system, examining how different components of the system will interact and function together smoothly.

The Design phase is about the actual creation and designing of the Online Job Application System by the researcher. This phase is about making the prototype of the system based on the requirements that have been planned for the first phase. The researcher used an app, the FIGMA to be specific, to create a prototype to illustrate the user interface (UI) of the system. This phase is where the developer shows the flow of the system and how the users will interact with it. It's where the ideas created by the researcher materialize into tangible components.

The implementation phase is about the actual construction and execution of the system will held. The developers did code in this phase to produce the system in order for it to be functional, that was based on the set scope on the proposal. The first construction in the system was about the

## University of Caloocan City – North Campus

Biglang Awa St. Grace Park East. Caloocan City

### Computer Studies Department

registration process of the applicants and employer with the integration of OTP's that was connected to the emails for validations purposes. The second was the making of the landing page of each user. The next was the job posting functions, applying functions, status functions, the scheduling functions and the other additional features such as certificates for training or seminars. This phase is the longest and time consuming because this is where the developer needs to create a system that meets the scope and requirements on the first three phase, the developers need to give the full focused to avoid errors and to have a progress. The testing and integration phase is an important step in the software development process, it aimed at ensuring the system's functionality and also its reliability. During this phase, the tester who is responsible for checking the system. The tester did the unit testing for individual components like the registration process to check the validations of the form, and when there's an issue that was spotted, it will be reported to the developers to be fixed. The tester continues on checking the system until it was verified that it was in good state and won't mess up. The Maintenance phase, this is the last page of the cycle, to ensures that the system remains running at peak performance. This includes the maintenance of the system and the future updates and expansion of the system that will be based on the clients wants and needs.

The Software Development Life Cycle (SDLC) serves as a beneficial framework used for the initiation and executing various software development task, encompassing designing, developing and upkeep of software systems. Additionally, it furnishes a systematic approach aimed at enhancing the standard of software applications integrated within organizational operations. In today's business world, where software is important, the existence of multiple SDLC process equips enterprises with options for the most effective strategies in software development.

### CHAPTER 3

#### DATA GATHERING AND OUTPUT

##### 3.1 Data Gathering

The system that the researcher develop was a generic type therefore during the data gathering they conduct an interview with the possible client that may cater the system. The study conducted was approved by the LMA (Love Memories Recovery) THERAPY CENTER CO. and the two applicants Mr. Jocson and Ms. Guia through giving a request letter. The data gathering process for the development of the Online Job Application System involved comprehensive procedures aimed at collecting insights from key stakeholders. In facilitating the instrument, the researchers formulated a set of questions to attain a clear understanding of the topic. It contains questions about client profile and also the procedures about the hiring process to ensure a thorough understanding of the client's respective needs, preferences, and challenges in the recruitment process. Once the questionnaire had been formulated, the researchers sought validation of the instrument from the subject adviser before proceeding to the interview protocol.

##### 3.2 Data Gathering Instruments

The data gathering instruments utilized during the research process were customized for each data gathering procedure with the purpose of collecting pertinent information from clients, who are the primary users and who will cater to the Online Job Application System. The following section outlines the instruments that were utilized:

###### **Interview**

The researchers used this instrument a semi-structured interviews were carried out separately with clients to delve deeper into their experiences, viewpoints, and needs regarding

# University of Caloocan City – North Campus

Biglang Awa St. Grace Park East. Caloocan City

## Computer Studies Department

online job application systems. The participants were inquired about challenges in the current recruitment procedure, requested characteristics in an online job application system, communication and interaction preferences, and opinions on prototype features and usability. The information acquired from the interviews played a crucial role in enhancing the design and functionality of the system to meet the requirements of clients.

### **Survey Questionnaires**

The researchers used open-ended questions to allow the client to express a given subject based on their complete knowledge and understanding.

### **Prototyping**

The researchers create a prototype model of the system to gain insight gathered from the interview. The prototype underwent testing with the clients. The participants were tasked with carrying out a range of activities using the prototype, including posting job openings, submitting applications, arranging interviews, and managing profiles. Observations were made on their interactions with the prototype, and feedback was gathered on aspects such as usability, functionality, and the overall user experience. The testing of the prototype facilitated the identification of areas necessitating improvement and refinement in the system design prior to full-scale development.

### **Data Analysis**

The researcher analyzes the data from interviews and prototype testing and carefully reviewed. The needs, preferences, and difficulties faced by employers and candidates during the hiring process were clearly understood through the analysis which helped shape the creation and use of the online job application system

## CHAPTER 4

### THE EXISTING SYSTEM

#### 4.1 Company Background

##### A. The Company

- Company name

LMA (Love Memories Recovery) THERAPY CENTER CO.

- Company Address and Branches

LMA THERAPY CENTER CO. located at Aiza bldg, 134, Mindanao Avenue, 3C,  
1106 Mindanao Avenue, Quezon City, 1106 Metro Manila

##### B. Nature of Business

- Product Services

Educational and Behavioral Services

##### C. Brief History of the Company

Love Memoirs Recovery Therapy Center is founded in pursuit of having Applied Behavior Analysis (ABA) be adapted to everyday activities and be of helping hand to every family having difficulties with their child's challenging behavior. Initially, the LRM Therapy Center conducted its hiring procedures manually, relying on paper-based documentation for collecting applicant data and requirements. This traditional method placed a significant burden on employers, resulting in lengthy wait times to attract suitable candidates for the job vacancy.

In an effort to streamline their processes, the center transitioned to utilizing Google Sheets

for storing applicant requirements. However, this solution proved insufficient, as they still encountered limitations, particularly in communication with applicants.

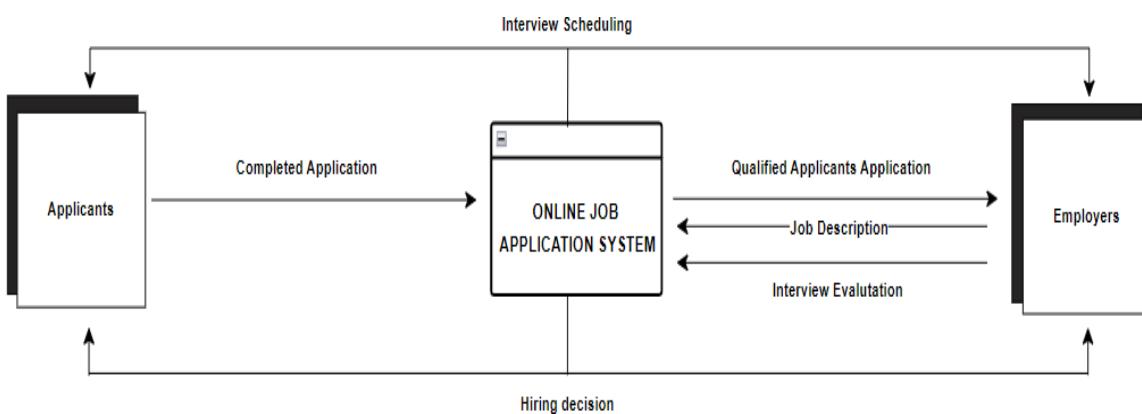

Despite accepting online applications, the center still received walk-in applicants. During interviews conducted by researchers, the reluctance of the center to fully embrace online job application systems became apparent, highlighting the need for innovation in their hiring processes.

#### **4.2 Description of the System**

The existing job application system of the LMA THERAPY CENTER CO. is manual-based. The general objective of the system is to receive job applications from job seekers and review the requirements provided by the applicants and stored it on a google sheets. The system processes applications and notifies selected candidates manually.

### 4.5 Problem Areas

The Problem areas with the existing system was about the paper-based materials that both employer and applicant use. The use of hard copies is inconvenient because the applicant might encounter an accident while holding the requirements and at the same time the employer might

**University of Caloocan City – North Campus**  
**Biglang Awa St. Grace Park East. Caloocan City**  
**Computer Studies Department**

misplace those papers and might not retrieve it anymore. The lack of awareness about the status of your application to the chosen job is also part of the problem, it's about being clueless of what will be the result of the application process. The repeated creation of paper-based job advertisement is also a problem, the employer will have to spend money. The searching for a job vacancy through walk-in is also a problem because some unfortunate events might happen like being part of cut-off time and with that the applicant time and efforts will turn into waste.

## CHAPTER 5

### THE PROPOSAL SYSTEM

#### 5.1 System Overview

JobSync is an online platform designed to make the employment process for both job seekers and employers easier. At its core, JobSync offers a job posting feature, allowing employers to advertise specific jobs that their company's needs. For job seekers, the platform provides a user-friendly interface to search and apply for jobs that match their skills and preferences.

In addition to job listings, JobSync also has a feature that gives electronic certificates (e-certificates). These e-certificates serve as verifiable credentials that applicants can earn and display to potential employers, showcasing their qualifications and achievements. JobSync also has a feature on where they can edit their profile and upload their resume. The website has a dual audience; it is a resource for applicants to find suitable job opportunities, build their professional profile and track their application status. For employers, JobSync is a valuable tool for managing job postings, screening candidates, and issuing e-certificates to endorse skills and training.

Overall, JobSync seeks to provide a connection between applicants and employers. JobSync is a dynamic and efficient job community. The platform's dual-purpose guarantees that both parties have access to a full set of services to help them achieve successful employment results.

### Computer Studies Department

Landing Page of Registered Applicant:

The screenshot shows the JobSync website's landing page. At the top, there is a blue header bar with the JobSync logo on the left and navigation links for Home, Hiring Now, Popular Jobs, Company, a user profile for JONATHAN, and Logout on the right. Below the header is a large banner featuring a woman with glasses and a pink blazer working on a laptop. To her left is a stylized building graphic. The banner has a light blue footer bar. On the left side of the main content area, the JobSync logo and tagline "Where Opportunities Align With Ambitions – Your Path To Career Synchronization" are displayed.

Applicant can search and browse to find job:

The screenshot shows a job listing for a "Web Developer" on the JobSync platform. The page has a blue header bar with the text "Hiring Now". Below it is a search bar with the placeholder "Search by Job Title or a Company...". The main content area features the job title "Web Developer" in bold. The job listing is contained within a light blue box. It includes sections for "Qualification/Work Experience" and "Job Description", both of which mention computer programmers writing programs. It also includes sections for "Company" (RIOT GAMES PH) and "Location" (11F, One Ayala West Tower, Ayala Avenue, corner Edsa, Makati, 1223 Metro Manila). At the bottom of the listing are two buttons: "Apply" and "Date Posted: April 5, 2024" (which is also repeated at the very bottom of the page). The date expiration is listed as "Date Expiration: April 26, 2024".

### Computer Studies Department

Certificate section where training/seminar certificates posted.

The screenshot shows a user profile page with the following details:

- Real name: Aeron Guillermo
- Contact No.: +639615872321
- Educational Attainment: BS INFORMATION SYSTEM

Below the profile, there are buttons to "Download your resume here!" and "Upload New Resume".

The main content area is titled "Certificate" and displays a digital certificate for Aeron Guillermo. The certificate is from JOBSYNC and is titled "CERTIFICATE OF ACHIEVEMENT". It includes a gold ribbon seal, the recipient's name, and signatures for the "Chief Executive Officer" and "Training/Seminar Coordinator".

Email Notification for Receiving E-Certificate

The email inbox shows an incoming message from "JOBSYNC <me.jobsync@gmail.com>" to the user. The subject is "Communication from HR regarding your Training/Seminar with our Microsoft PH Company". The message body contains a thank you note, a link to check the certificate online, and a scanned version of the certificate attached to the email.

### Employer Side

Sign in For Applicant

The screenshot shows the "Sign in as Employer" interface. It features fields for "Email" and "Password", a "Sign In" button, and links for "Register as Employer" and "Forgot Password?". A blue arrow points from the "Register as Employer" link to a separate, highlighted box containing the same text.

Employers registered landing page:

The landing page for JobSync features a large, professional photograph of a smiling man with a beard and short hair, wearing a dark blue suit jacket over a white shirt. The background is a plain, light color. Above the photo, the word "JOBSYNC" is written in a bold, black, sans-serif font. Below it, a smaller line of text reads: "Where Opportunities Align With Ambitions – Your Path To Career Synchronization". The top navigation bar is blue and includes links for "Home", "Job Vacancy", "Applicants (1)", "David", and "Logout".
